Column Wrap Kits . . . Do It Yourself

in 6", 8" or 16" width, all at a 36" height. They have been used in residential and commercial applications as deck posts, around parking lot lights, to accent horizontal fence members and as entry way and porch columns. The cap is in the sandstone pattern as either a 2 pc for around a column or a 1 pc to cap off a post. The 2 piece locks together in the corners and can be cut out in the center to fit around

a square or round column. Sandstone 6" kits are stocked in Buff, Gray and Red. Drystack 16" kits are stocked in all of the coordinating panel colors along with an assortment of 8" columns. Call for availability of an 8" kit or a Ledgestone kit. Items not in stock can be placed on special order with an extended lead time.

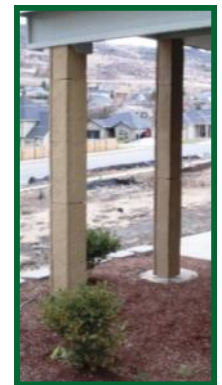

The Column Wrap is a unique piece that can act as matching trim or stand alone, available

Installation Instructions for 4 piece Column Wrap

16" Column Wrap Kit Installation Instructions

Frame out the post or column to 12 1/4" X 12 1/4". Identify panels 1-4, make sure arrows point up. Attach panel 1 making sure it is square and plumb to the post. To attach use 2 1/2" decking screws. Screw through the rock, selecting

recessed rock faces preferably of the same color (to make touch up easier). Attach the panels moving counter clockwise around the post with panel 2, then 3,

then 4. Make sure panels are the same height to maximize the rock alignment. If additional height is needed, simply stack the next row flush to the top of the first row. Attach the same way. If covering a post, simply cut the panels to the desired height, attach as described above, and attach the 1 piece post cap, using polyurethane adhesive or screws. If covering a column, at the point of transition, attach the 2 piece post cover. Measure the diameter of the post and cut out each side of the post cover. (For 4X4 and 6X6 posts, use the prescribed marks on the inside of the post cap. Attach using polyurethane adhesive or screws. Be sure to

caulk seams for weather proofing before flashing.

Optional Touch Up

1) Touch up all screw heads and unwanted gaps with NextStone's textured grout. Apply a small amount to each spot, and feather out the grout for a smooth transition. 2) Wait for the caulk to get tacky (it does not get hard). 3) Using the touch up Paint Kit, apply the appropriate color to each spot. (There are 3 colors, light, medium and dark. Make sure to check for color before continuing). 4) Feather out the paint onto the rock surface for realistic results. Note: If the color does not match exactly, paint the entire rock for a more natural look.

Project of the Month

PANEL - Drystack
 COLOR - Kentucky Gray
 CORNERS - Drystack Outside Corner
 TRIM - Ledger, Ledger Corners, and Window and Door Trim in Gray

In April, Lowes “Women’s Build” project constructed this playhouse to promote Habitat for Humanity of Union County in Marysville, Ohio.

Nextstone, along with several other companies donated the materials used to construct the miniature building complete with metal roof, window, and flower box.

The Playhouse is to be raffled off on June 25th at the BBQ Festival in downtown Marysville.

Website Inquiries . . .

One of the most recent questions that we have seen come across the website lately is people who are wondering if it is possible to use two different styles of rock panels. As you see pictured, not only is it possible but it will really give your stonework a distinct look.

Extra, Extra . . .

We are sure that you will agree that pictures of completed jobs and good quality literature is important for all of us to achieve goals. You can help. NextStone is asking that you submit photos by email to: kathyh@nextstone.com If your photo is selected for publication, you will receive a \$50 Visa or MasterCard gift card. If you choose to mail your pictures, please mail them to our office address as shown.
